MAKE YOUR FIRST MOVE

Your first Short starts here.

Your first Short with EasyCut

From source footage to your next improvement

WHAT YOU WILL MAKE

Finish a video and outline the next one

FIELD GUIDE / 13 PAGES / EN

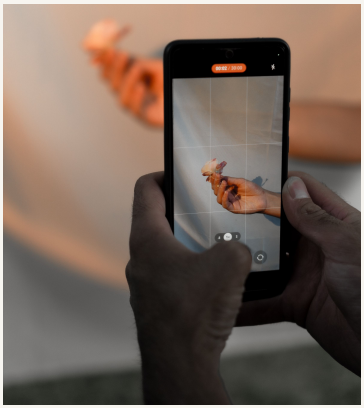

START HERE

Read it. Make it. Keep it.

WHAT YOU WILL MAKE

Finish a video and outline the next one

One page. One practical next step.

FIVE PRACTICAL LESSONS

03 One viewer, one question

04 With or without footage

05 An opening and three scenes

06 Check the edit yourself

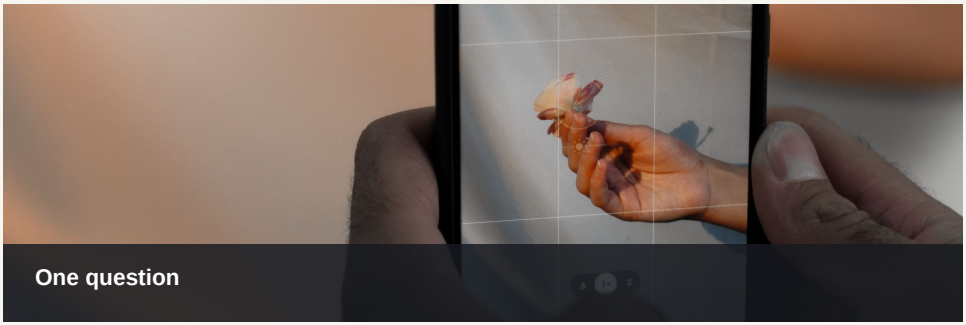

07 Turn feedback into your next video

YOUR WORKING TOOLS

08 Workflow / 09 Scenes / 10 Pace / 11 Notes / 12 FAQ

LESSON 01 / 05

One viewer, one question

Don’t fit your whole channel into one Short. Choose a person, such as a beginner filming at a small desk, and one question they face today. A workable topic can be demonstrated in a scene. “Keep a charging cable out of your shot” is easier to film than “be more productive.” Keep a note of related questions for later; they don’t all belong in this video.

TRY THIS APPROACH

> Show the tangled cable, fix it with your hands, then show the difference. You now have a simple story, not a list of tips.

YOUR TURN

Fill in: My viewer is __. Today they are stuck on __. I’ll demonstrate __. Check that the final blank is something you can actually film.

LESSON 02 / 05

With or without footage

02

Three scenes

If you have footage, find a section containing both the question and the answer, or the problem and result. Without footage, plan a demonstration you can film yourself. Check supported source lengths and input methods in EasyCut's creation screen. Don't pad footage just to meet an input limit; record enough useful context and process for a complete explanation.

TRY THIS APPROACH

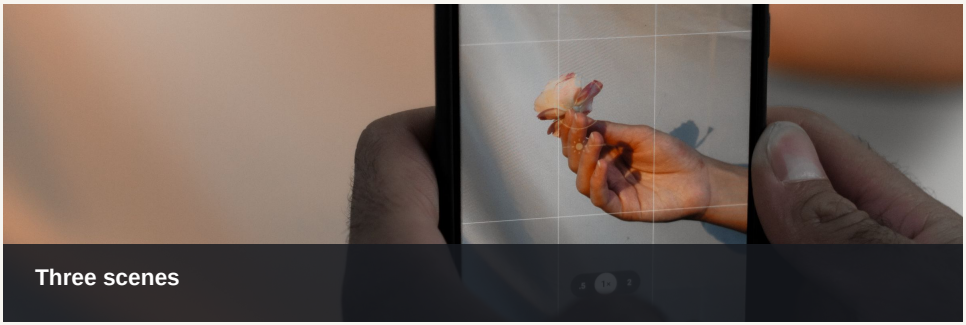

> A lesson clip that starts with "that works better" may make no sense alone. Keep the question, or clearly name the subject in the title.

YOUR TURN

Record: source location __; usage permission __; start __; end __; context that must remain __.

LESSON 03 / 05

An opening and three scenes

Three scenes

Open with a result you can really demonstrate, not a bigger promise than the video can deliver. Show one action or reason in the middle, then name the result and when it applies. Write one essential sentence for each scene instead of memorizing a long script. Leave small pauses so you can find clean editing points later.

TRY THIS APPROACH

> Opening: “Try this if a cable keeps catching your hand.” Demonstrate securing it to the side. Move your hand to show the difference and explain that the fixing method depends on the desk surface.

YOUR TURN

Opening __ / evidence shot __ / result and limitation __. If a sentence has no supporting scene, narrow the claim or film the missing evidence.

LESSON 04 / 05

Check the edit yourself

04

One Short

An AI draft is a candidate to review. Compare numbers, names, and negative statements with the source. Shortening “I wouldn’t recommend it for this use” into “I recommend it” changes the meaning. Preview captions on a phone and check that the subject stays visible. If the cut removes essential context, fix the selection before polishing the typography.

TRY THIS APPROACH

> “Used it three times” and “used it for three months” are different claims. Keep the title within what your actual experience supports.

YOUR TURN

Watch once muted, once with audio, and once against the source. Note meaning errors __, hard-to-read captions __, and cuts to change __.

LESSON 05 / 05

Turn feedback into your next video

01 One question > **02** Three scenes > **03** One Short

One video cannot settle whether a topic will work. Record production time alongside viewers' questions so you can choose a useful next step. Change one variable in the next video: topic, opening, or length. Compare at similar times after publication. Treat small samples as clues to investigate, not proof of success or failure.

TRY THIS APPROACH

> If people watch but keep asking what it is for, move the use case to the opening of the next episode.

YOUR TURN

Time spent __ / repeated question __ / one change for the next video __ / review date __.

EASYCUT / FROM SOURCE TO SHORT

Make it with EasyCut

1

Choose footage and a message

Mark a complete question-and-answer section in your footage. Prepare an authorized YouTube source link and write the message in one line.

2

Make a draft in EasyCut

Add your source, check the creation settings, and generate highlights. Choose one that fully answers the question, then edit the title and captions in your own voice.

3

Review and publish yourself

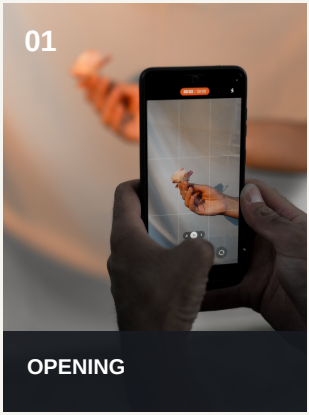

Check numbers, names, and context against the source. Preview text and framing on a phone, download the finished video, publish it, and record the metrics below.

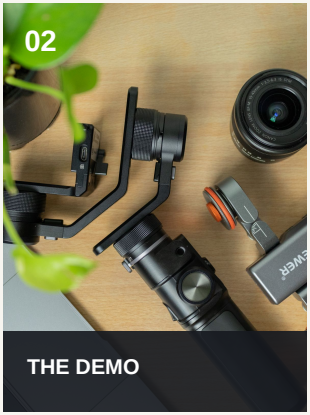

Inputs and features may vary by account and screen. Check support for uploading or scheduling instead of assuming it is automatic.

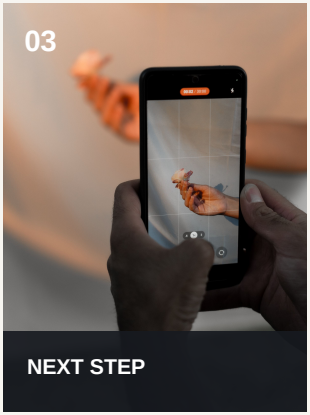

STORYBOARD / A WORKING DRAFT

Think in three scenes

A practice storyboard. Photos suggest a visual approach; adapt the scenes to your own experience and footage.

OPENING	The mistake beginners make most
THE DEMO	Pair one common mistake with a fix viewers can try right away. Close-up demo → before/after under the same conditions → caption the result
NEXT STEP	Invite viewers to leave one question they'd like you to answer next.

SHOT NOTES: source / in & out points / words to verify

YOUR PACE / YOUR PLAN

Find your own rhythm

Start with a schedule you can finish. These are ways to divide the work, not promises about how many videos you will produce.

Under 30 minutes a day

Day 1

Pick one idea

Write down one viewer and one thing you want to tell them.

Days 2-3

Prepare your footage

Film the scenes you need or choose clips from your own videos.

Days 4-5

Edit your first Short

Work on the structure one day and check captions the next.

Days 6-7

Publish and reflect

Publish when you can, then note one thing to change next time.

Weekend sessions

Beforehand

Collect your ideas

When you have a spare moment, jot down questions and scenes to film.

Saturday

Prepare your footage

Choose your own clips or film the scenes you need in one session.

Sunday

Edit and check

Check captions and context, then get your videos ready to publish.

Next week

Publish and check the response

Publish when you can, or use YouTube’s scheduling feature.

Time your own work, then adjust next week’s plan.

WORKSHEET / MAKE IT YOURS

Notes for your next Short

Turn the ideas into your own video. Save or print this page and fill it in as you make each Short.

1 **Whose question will you answer?**

2 **Your evidence and source footage**

3 **Your opening and closing lines**

4 **Time: filming / editing / review**

5 **Questions and responses observed**

6 **One change and a review date**

FIELD QUESTIONS / REAL NEXT STEPS

A little help when stuck

Q1 Can I use the AI-selected clip as it is?

Check numbers, names, and context against the source. Preview text and framing on a phone, download the finished video, publish it, and record the metrics below.

Q2 Do I need to post daily with my schedule?

Today, finish only the opening and scene selection. Edit in EasyCut next session and review separately. You don’t need a daily upload target.

Q3 How can I stand out without showing my face?

Show firsthand evidence: conditions, failed attempts, and why you chose a method. Add your own explanation and edit out repetition.

Q4 What should I change when response is weak?

Time topic selection, filming, EasyCut editing, and review separately. Batch similar scenes and keep one caption style for your first video.
